**Geisinger Health System, Precyse Solutions and M*Modal Announce
Strategic Partnership to Improve Clinical Documentation and Billing Efficiency**

*Leading Health Information Management Innovators to collaborate on natural language
Processing (NLP) coding to redesign revenue cycle workflow, improving accuracy and timeliness*

Danville and Wayne, Pa., January 11, 2011—**Precyse Solutions**, a leader in health information management (HIM) services and technologies, **M*Modal**, a pioneer of advanced speech understanding technologies, natural language processing (NLP), and provider of on-demand conversational documentation, and **Geisinger Health System**, widely recognized for its implementation of innovative care models, today announced a first-of-its-kind partnership to improve clinical documentation and coding accuracy.

Precyse's automated, clinical documentation and **natural language processing-enabled (NLP)** coding software features a robust, **ICD-10**-ready, NLP-assisted coding engine driven by state-of-the-art NLP technology from M*Modal, that processes and understands human voice converting it to text and transforming it to information. This NLP-enabled, automated coding technology bridges Geisinger's electronic health record (EHR), dictation, transcription, coding and **clinical documentation improvement (CDI)** processes by capturing physician dictation, editing it, coding it and directing it into Geisinger's EHR software platform.

Geisinger physicians will be able to dictate directly into the EHR with minimal impact to their current workflow patterns. Clinical information is electronically tagged to be easily searched, mined and analyzed by healthcare team members responsible for driving hospital care and outcomes. This solution will also accelerate an organization's attainment of HITECH Meaningful Use.

The Precyse, M*Modal and Geisinger partnership will redesign revenue cycle workflow and will enhance coding efficiency while enabling fast and efficient responsiveness to physician queries. The partners aim to see this collaborative technology replicated across the country.

This single solution provides a snap shot of all necessary management, resource, and reporting tools for mission-critical health information management processes on one platform, easily monitored and managed through an easy-to-follow dashboard.

"Geisinger is eager to work with Precyse Solutions and M*Modal to innovate an enterprise-wide solution to physician documentation in the EHR, creating vast opportunities for improvement across the documentation continuum," noted Joan Topper, Vice President, IT Optimization, Geisinger Health System.

“Precyse is committed to finding newer and better ways to capture and format the clinical narrative to maintain health data integrity, drive EHR adoption and enable Meaningful Use compliance for our clients.” said Jeffrey Levitt, CEO and Founder, Precyse Solutions. “The reality today is that EHR implementation, adoption, and attaining Meaningful Use are major challenges for healthcare facilities and clinicians. Together with M*Modal, Precyse accepts physician affinity for dictation and transcription while meeting the facility’s objectives for improved healthcare delivery and superior information management. We are confident that this transformative partnership with Geisinger will surely generate extraordinary results.”

About Geisinger Health System

Geisinger is a an integrated health services organization widely recognized for its innovative use of the electronic health record, and the development and implementation of innovative care models including advanced medical home and ProvenCare® ("warranty") program. The system serves more than 2.6 million residents throughout 42 counties in central and northeastern Pennsylvania. For more information, visit www.geisinger.org.

Geisinger. Heal. Teach. Discover. Serve.

About Precyse Solutions

Precyse Solutions has enabled more than 850 hospitals and health systems nationwide to improve efficiency and deliver tangible outcomes through its advanced proprietary software and services for more than a decade. Precyse Solutions accelerates the capture and utilization of the patient story and advances the health care reform agenda of transforming clinical data directly into meaningful health information. With products ranging from an integrated transcription and coding platform with advanced speech recognition, expert workflow technologies and natural language processing tools to HIM consulting and services, Precyse Solutions flexible software can be delivered standalone or complemented by a professional staff of more than 1,200 experts.

Now more than ever, hospitals are challenged to achieve meaningful use of the legal health record. Precyse Solutions is the partner hospitals across the country choose to achieve this goal.
